

Project Name	Soil Protection And Rehabilitation For Food Security (SEWOH)		
Country	<i>India</i>	Project Location Districts	<i>Madhya Pradesh</i>
Duration	<i>April 2016 to March 2019</i>		<i>Maharashtra</i>
Client Name	<i>Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) & NABARD</i>		
Objective/Narrative Description of the Project			
<p>The programme works in Benin, Burkina Faso, Ethiopia, India and Kenya, and coordinates its activities locally with the ministries responsible. To accelerate its success, in each country the programme is linked in with existing bilateral programmes run by German development cooperation actors.</p> <p>The programme promotes a sustainable approach to land use. This approach is largely based on the active participation and involvement of the smallholders concerned, who represent the main target group. But other players from the private sector, civil society and government offices are also involved in the measures. In Kenya and Burkina Faso we implement with German consulting companies (GOPA/ AFC). Other significant financing agreements for implementation with partners were concluded in several countries (for example NABARD, WOTR, FES and BAIF in India, AFC and ODI in Ethiopia/ Afar, Hunger Project e.V. in Benin and WHH in Kenya). Additionally the programme cooperates with the international (agricultural) research in applied science (CIAT, CIMMYT, ICRISAT, TEAGASC, University of Bern).</p> <p>Activities are run on a participatory basis, which means the target group is involved in planning and implementation. The objective is to directly strengthen the smallholders' capacity to help themselves. This is achieved by giving the farmers support in applying proven soil protection practices.</p> <p>Non-governmental players form an important part of the technical knowledge networks, which are also promoted by the programme. Their experts contribute relevant knowledge. Here a key role is played above all by the academic and research community and accompanying research carried out within the programme.</p> <p>At the political level the programme advises the partner governments on improving the general political conditions. The governments have to create incentives for farmers and smaller enterprises to use the soil in more sustainable ways. To support these national activities, the programme organizes international forums that encourage the participants to share lessons learned.</p>
